Ceremony Scheduled to Recognize Kingfisher Armory is Ready for Reuse

The Oklahoma Department of Environmental Quality (DEQ) announced today that the Kingfisher National Guard Armory is now ready for reuse by the City of Kingfisher. A special ceremony will be held May 4, 2012, at 1:30 p.m. The ceremony will take place at 301 N. Sixth Street, Kingfisher, Oklahoma.

Armories such as the Kingfisher facility were cleaned up as part of DEQ's Site Cleanup Assistance Program (SCAP). Funding for SCAP was enacted by 2006 legislation from an existing gasoline assessment. Through that program, DEQ evaluates and remediates environmental hazards at surplus National Guard armories. The cleanups allow armories to be safely transferred to local governmental entities. More than 50 armories across the state are being addressed as part of SCAP. Additional ceremonies will take place as other armories are cleaned up.

Environmental issues common to many of the facilities are contamination from indoor firing ranges, lead-based paint, and asbestos. DEQ works closely with local community leaders to ensure their needs are met and these potential hazards are properly remediated prior to ownership transfer.

Cleanups are conducted in cooperation with the Oklahoma Military Department and the Department of Central Services. More information on SCAP is available at www.deq.state.ok.us/LPDnew/scapIndex.htm.
